DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-22 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of copending Application No. 10/631,335. Although the conflicting claims are not identical, they are not patentably distinct from each other because Claim 14 of the instant application and Claims 1,3 of copending Application No. 10/631,335 are claiming same subject matters and both are very similar. Both Claim 14 of the instant

Art Unit: 2673

application and Claims 1,3, of copending Application No. 10/631,335 are claiming a backlight assembly comprising:

a lamp assembly including a plurality of lamps arranged in parallel, each of the lamps having a first electrode formed at a first end and a second electrode formed at a second end, the lamp assembly providing the lamps with a power voltage to turn on or turn off the lamps;

a receiving container that receives the lamp assembly, the receiving container having a plurality of openings facing each of the lamps;

a lamp driving device including i) a substrate facing the receiving container, a lamp driving module, mounted on the substrate, to provide the lamps with the power voltage,

a plurality of sensors, disposed on the substrate to face the lamps, to detect an operation state of the lamps to output a plurality of sensing signals,

a voltage cut-off module, disposed on the substrate, to compare the sensing signals with a predetermined reference signal, the voltage cut-off module providing the lamp driving module with a voltage cut-off signal to prevent the lamp driving module from providing the lamps with the power voltage when at least one of the sensing signals has an amplitude smaller than the reference signal.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Similar analysis is applicable to Claims 1-13 and 15-22 of the instant application.
